- Propane Tanks
- Gas or Electric Heating Equipment
- Gas or Electric Water Heaters
- Central Air Conditioning
- Duct Work
- Air-to-Air or Ground Source Heat Pumps

Propane

Propane tanks can either be leased or purchased. CES will set a new tank at no charge up to 30 feet from a home. This includes all blocks, copper or plastic tubing, fittings and regulators. If placement by the home owner is requested for more than 30 feet from the home, the customer may be charged up to \$1.50 per foot for trenching and materials, depending on the circumstances.

Payment Options

Pre-Pay

Because propane prices can vary during the year, CES has a pre-pay program allowing the homeowner to receive a guaranteed price throughout the year. This program is being offered in August each year.

The customer prepays, in full, for the number of gallons desired for the next heating season. The price paid per gallon at the time of signing the contract is guaranteed through March 31 the following year. That price is guaranteed for the number of gallons purchased only. If the customer exceeds their prepaid gallons, all remaining gallons delivered will be at the current cash price.

Ceiling Contract

A ceiling contract is a futures contract guaranteeing a maximum price a customer will pay during the winter. The customer pays a deposit of 10% of the contracted price, and will pay the remaining cost of each delivery according to credit terms. The customer pays the current cash price or the contracted ceiling price, whichever is lower.

HVAC Options

CES offers a complete line of Amana and Gibson heating, ventilation and air conditioning equipment, as well as gas and electric water heaters. Customers can purchase and have installed all or any portion of their HVAC needs. Each homeowner will receive an individual bid for their specific needs. CES may require a down payment on equipment and labor before installation is made.
